

# IRAN - Tabriz

## Waste Utilization and Disposal

Regierungsbaumeister  
**SCHLEGEL**

### Client

Tabriz City Council

Pishgaman Zist-Mohit  
Urban Management

### Period

2006 - 2007

### Project Cost

43.000.000 €

### Abstract

About 1.5 million people live in city of Tabriz, where an annual waste quantity of about 473,000 Mg/a is generated. Presently, wastes are collected without separation and are disposed on a landfill outside the city of Tabriz. Wastes are neither separated nor utilized.

The Feasibility Study aims at utilization and disposal of wastes in Tabriz by working out a waste management concept, according to the international standards and requirements for environmental protection and sustainability measures. This will guarantee well-regulated collection, separation and utilization of wastes for the future. A waste incineration plant is not considered in the construction cost listing.

### Scope of Service

feasibility study  
master plan

### Technical Data

Inhabitants	1.5 million
Waste quantity	473,000 Mg/a
