

Penzberg

Penzberg Sewage Treatment Plant Renewal of Process Control System

Regierungsbaumeister
SCHLEGEL

Client

Kläranlage Penzberg GmbH

Period

2006 - 2006

Project Cost

112.000 €

Abstract

Penzberg Sewage Treatment Association, the operator of the treatment plant, and Penzberg Public Services, in charge of the urban water supply, dispose of process control systems, model Sattgraph 5,000, for automation and process visualisation procedures.

As these products do not correspond to the state-of-the-art technology and because of difficulties in procurement of spare parts, it was necessary to replace the process control systems. The existing remote control system for the sewer network and water supply system were maintained and connected to the new process control system.

Scope of Service

execution design, preparation of tender documents
technical equipment

Technical Data

Data points	3,000
Water supply	500
